Shasweendran Jayakumar

Full-Stack Developer · Laravel / PHP · React & TypeScript

Backend-first full-stack developer with **5+ years** building commerce platforms, point-of-sale systems and multi-tenant SaaS that run in real shops, restaurants and car parks. Strongest in **Laravel and PHP** — REST APIs, authentication and role permissions, queued jobs and reporting — and comfortable taking work end to end, from database schema to a deployed Docker stack.

Experience

Kuala Lumpur, Malaysia
Aug 2024 – Present

Full-Stack Developer

Crave Asia

- Lead developer on the **QBotu** and **QBot** commerce platforms, owning the Laravel backend: REST APIs, Sanctum authentication, Spatie role permissions, queued jobs and reporting.
- Built React and Ionic front-ends for POS, kiosk and tablet, packaged to native Android with Capacitor.
- Delivered payment gateway integrations, ESC/POS thermal printing, and offline-capable POS that keeps trading without a network.
- Set up the Docker Compose stacks and deploy scripts the platforms ship on.

Subang Jaya, Malaysia
Nov 2021 – Aug 2024

Web Developer

Appolous

- Laravel development on **Appolous BMS**, a cloud business-management and POS product covering sales, inventory, clients and visit tracking.
- Backend performance work with **Laravel Octane on Swoole** and Redis caching; moved email and SMS onto queues and split databases so reporting stopped slowing the operational side.
- Built third-party integrations including Stripe payments, Lazada marketplace sync and the **Meta Conversions API**, and fixed backend issues across live merchant sites.

Klang, Malaysia
Mar 2021 – Jun 2021

Application Engineer

LCP Buildsoft Technology

- Developed and maintained application features, and analysed code to correct errors and optimise output.
- Translated user needs and system functionality into technical design specifications.

Shah Alam, Malaysia
Nov 2020 – Jan 2021

Web Developer (Intern)

Opensoft Technologies

- Built and maintained web applications in Laravel, PHP, JavaScript and jQuery.
- Tested and debugged for cross-browser compatibility, and prototyped new pages and features.

Selected Projects

Commerce platforms, POS systems and multi-tenant SaaS — with screenshots and technical detail:
