Remote · available for contract work

Technical Skills

Backend
Laravel 8–13, PHP 8.x, REST APIs, Sanctum, Spatie Permissions, queues & jobs, task scheduling, Octane / Swoole, Eloquent

Frontend
React 18/19, TypeScript, Vite, Tailwind, Framer Motion, ES6+, Blade, Bootstrap 4/5, jQuery, HTML5, CSS3

Data
PostgreSQL, MySQL, Redis, schema design, query optimisation, read/write splitting, Dexie / IndexedDB

Infrastructure
Docker & Compose, Nginx, Caddy, queue workers, DigitalOcean Spaces, MinIO / S3

Mobile & Devices
Ionic 8, Capacitor, Android builds, POS / kiosk / tablet, Sunmi devices, offline-first sync

Real-time & Testing
Laravel Reverb, Pusher, WebSockets, PHPUnit, Vitest, Playwright, Cypress, Git, GitHub Actions

Shaswin Kumar

Full-Stack Developer · Laravel / PHP · React & TypeScript

Backend-first full-stack developer, **5+ years** and **9 production systems** running in real shops, restaurants and car parks — not demos. Strongest where projects usually stall: **third-party API integrations** (accounting, payments, marketing), **multi-tenant data isolation**, offline-first clients, and driving physical hardware directly. End to end, schema to deployed Docker stack.

Selected Projects

QBotu — Multi-App Commerce & POS Platform

LEAD DEVELOPER

Four client apps (POS, kiosk, tablet, web) on one Laravel API, with a 9-service Docker stack that boots with a single command.

- Laravel REST API on **PostgreSQL** with Redis, queued jobs and **Reverb WebSockets** driving live order updates across all four clients.
- Built **561 React + TypeScript components**; POS, kiosk and tablet packaged as native Android via Capacitor.
- Integrated **Stripe** and GKASH payments, plus ESC/POS receipt printing through a dedicated print-agent service.
- Delivered Malaysian **LHDN MyInvois e-invoicing** with MSIC tax codes, and two-way sync to **QuickBooks Online** and **Xero**.
- On-device face recognition with MediaPipe; IndexedDB offline sync keeps the POS trading when the network drops.

Laravel 13 · React · TypeScript · PostgreSQL · Redis · Docker · Reverb · Capacitor · Stripe · MinIO · Playwright

QParking Cloud 2.0 — Multi-Site Parking SaaS

LEAD DEVELOPER

Parking management SaaS for operators running multiple sites: live occupancy, automated plate-recognition gates, season passes, billing and ESG rewards.

- Laravel 13 REST API with **Sanctum auth and Spatie role permissions**; one React 18 + TypeScript + Vite frontend serves three separate portals (HQ admin, site operator, customer).
- Integrated a vendor **LPR camera SDK** and TCP-controlled barriers and kiosks so vehicles enter and exit unattended.
- Designed the customer/vehicle/pass/bay model: a pass covers a pool of plates while concurrent entry is capped by bays, with the on-premise gate controller sharing the same model so the two cannot drift apart.
- 18-table schema; three Docker Compose overlays (local, staging, production) over one base file, with a deploy script that backs up the database before rebuilding.

Laravel 13 · React 18 · TypeScript · Vite · Tailwind · MySQL · Docker · Sanctum · Spatie

QBot — Multi-Tenant Management & Ordering Platform

LEAD DEVELOPER

Multi-tenant Laravel platform with separate APIs for back-office and POS/kiosk clients. Led since the first commit.

- Sanctum token auth, Spatie permissions and a modular API layout enforcing **tenant isolation**.
- Authored all **267 Blade templates**: Bootstrap 5 back-office with DataTables, Select2 and ApexCharts, plus a **white-label storefront theme** where each tenant gets its own branding, including RTL support.
- Integrated GKASH payments, QuickBooks and Xero accounting, Pusher real-time events, Mailgun transactional email, and PDF/Excel report exports.
- Scheduled tasks with **overlap guards**, tenant-scoped nightly jobs, and expiry sweeps for work queued but never claimed.

Laravel 11 · PHP 8 · Blade · Bootstrap 5 · jQuery · Sanctum · Spatie · QuickBooks · Xero · Pusher · MySQL

QBot POS — Offline-First Mobile POS

SOLO BUILD

Cross-platform POS that keeps trading with no internet and prints straight to a thermal printer.

- Ionic 8 + React + TypeScript UI with **Dexie (IndexedDB)** holding data locally and reconciling on reconnect.
- Ships its own thermal print server; packaged native for Android through Capacitor. End-to-end flows covered by Cypress.

Ionic 8 · React · TypeScript · Capacitor · Dexie · Tailwind · Cypress

Appolous BMS — Cloud Business Management & POS

BACKEND / PERFORMANCE

Business management and POS system for small businesses: sales, inventory, clients and visit tracking.

- Ran **Laravel Octane on Swoole** with Redis caching to hold up under concurrent load; moved email and SMS onto queues and split the databases so reporting stopped slowing the operational side.
- Built the **Meta Conversions API** integration on the Facebook Business SDK — server-side purchase and cart events with hashed user data and a Meta access token stored per merchant account.

Laravel 10 · Octane / Swoole · Redis · Stripe · Meta Business SDK · Lazada · MySQL

SaltyCustoms — Custom-Apparel E-Commerce

CONTRIBUTOR

Laravel 8 platform for custom-printed apparel: two storefronts sharing one back-office across 245 Blade templates.

- Delivered the **QuickBooks Online integration**: OAuth setup, sync functions, and migrations linking customer accounts and orders to their QuickBooks records.
- Implemented GA4 and Meta Pixel tracking, building gtag payloads for add-to-cart, remove-from-cart and purchase events from real cart data.

Laravel 8 · Blade · Bootstrap 4 · jQuery · QuickBooks · GA4 · Meta Pixel · MySQL

February Bloom — Order & Delivery Management

CONTRIBUTOR

Laravel platform for florist order and delivery management, wiring the storefront to on-demand courier fleets.

- Built the **Lalamove v3** and **Borzo** courier integrations end to end: hand-rolled HMAC-SHA256 request signing, multi-stop route-optimised quotations, bulk dispatch across selected orders, and signature-verified webhooks that advance orders to Delivered on courier completion.
- Two-way **Shopify** sync: scheduled nightly order import mapping products, variants, customers and addresses onto local records, plus fulfilment push-back through the Admin GraphQL API.
- In-store **print pipeline**: dompdf renders consignment notes, gift-message cards and photo prints (A4/A5/A6, 4×6) into a print queue; a **Node.js agent** on the shop PC registers its local printers with the app, polls the queue, prints each job at the right paper size and orientation, then clears it.
- Role-based permissions, country/state helpers and phone-number validation; migrated slow synchronous jobs onto queues.
- Worked across **141 Blade templates** on a themeable Bootstrap 4 setup with reusable form partials and a CSS override layer.

Laravel · Blade · Bootstrap 4 · jQuery · Queues · Shopify · Lalamove · Borzo · Spatie · Node.js · dompdf · MySQL

Printer & Hardware Tooling

SOLO BUILD

Node.js utilities letting a web app drive real retail hardware.

- Generates **ESC/POS and TSPL command bytes** for receipts and labels, kicks the cash drawer open, and bridges browser to device over a WebSocket server.

Node.js · ESC/POS · TSPL · WebSocket

Third-Party Integrations Delivered

Payments · Stripe (PHP SDK, Stripe.js), GKASH checkout & webhooks

Marketing · Meta Conversions API, Meta Pixel, GA4 / gtag

Commerce · Shopify, Lazada marketplace sync

Messaging · Pusher, Laravel Reverb, Mailgun, MailerSend

Hardware · ESC/POS, Sunmi SDK, TSPL cash drawer, LPR cameras, TCP gates

Storage & Reporting · DigitalOcean Spaces, AWS S3, MinIO, PDF / Excel export

Accounting · QuickBooks Online v3, Xero OAuth2, token refresh

Tax & Compliance · LHDN MyInvois e-invoicing, MSIC codes

Logistics · Lalamove v3 HMAC signing, Borzo dispatch & webhooks

Auth & Security · Sanctum, Firebase JWT, Google 2FA, OAuth2 flows

Vision & Scanning · MediaPipe face recognition, html5-qrcode

Experience

Kuala Lumpur
Aug 2024 – Present

Full-Stack Developer
Crave Asia

Lead developer on the QBotu and QBot commerce platforms. Own the Laravel backend — APIs, auth, queues, broadcasting and reporting — and build the React and Ionic frontends plus the Docker setup that ships them to web and native Android. Delivered payment gateways, thermal printing and offline-capable POS.

Subang Jaya
Nov 2021 – Aug 2024

Web Developer
Appolous

Laravel development on the Appolous BMS cloud business-management and POS product: backend performance work, queued email and SMS, and third-party integrations including Stripe, Lazada and the Meta Conversions API. Also handled client-reported issues across live merchant sites.

Klang
Mar 2021 – Jun 2021

Application Engineer
LCP Buildsoft Technology

Built and maintained application features, and translated user requirements into technical design specifications.

Shah Alam
Nov 2020 – Jan 2021

Web Developer (Intern)
Opensoft Technologies

Built and maintained web applications in Laravel, PHP, JavaScript and jQuery; cross-browser debugging and prototyping of new pages and features.

Education

Kuala Lumpur
Jan 2018 – Jul 2020

Bachelor of Computing
SEGi College Kuala Lumpur

Upper Second Class Honours

Kuala Lumpur
2020

Certificates in Big Data Technology & Management, and Data Analytics with Python
SEGi College Kuala Lumpur

Kuala Lumpur
Jan 2015 – Oct 2017

Diploma in Computer Studies
SEGi College Kuala Lumpur

Availability: open to contract and freelance engagements, remote, GMT+8 with overlap into EU and US mornings. Most work above is commercial and private — code walkthroughs available on request.
